KS1	Noticing how counting in multiples if 2, 5 and 10 relates to the number of groups you have counted (introducing times tables) links to division.			
	An understanding of the more you share between, the less each person will get (e.g., would you prefer to share these grapes between 2 people or 3 people? Why?)			
	Secure understanding of grouping means you count the number of groups you have made. Whereas sharing means you count the number of objects in each group.			
Year	3	4		
Layers of vocabulary Appendix 1a Beck's Tiers of Vocabulary Appendix 1b: Vocabulary book	Basic to subject specific (Beck's Tiers): share, share equally one each, two each, three each group in pairs, threes tens equal groups of ÷, divide, division, divided by, divided into left, left over, remainder, dividend, divisor Instructional vocabulary: calculate, work out, solve, investigate question, answer, check NFER Arithmetic	Basic to subject specific (Beck's Tiers): share, share equally one each, two each, three each group in pairs, threes tens equal groups of ÷, divide, division, divided by, divided into left, left over, remainder, dividend, divisor Instructional vocabulary: calculate, work out, solve, investigate, question, answer, check NFER Arithmetic		
NC 2014	Write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including 2 digit numbers times 1 digit numbers progressing to formal written methods.	Practise to become fluent in the formal written method of short division with exact answers.		

Developing declarative, procedural, conditional knowledge

Links to tables

For example, use language of division linked to tables using counting stick

Using known facts

If $3 \times 2 = 6$, then $30 \times 2 = 60$, $60 \div 3 = 20$ and $30 = 60 \div 2$.

Partitioning strategy to halve Halve 68

Rearranging the dividend to find multiples of the divisor.

 $48 \div 3 =$

'What do I know about the 3 x tables?'
"I know 3 x 10 = 30 and 3 x 6 = 18."

Place value materials to represent calculations

Introduce the 'bus stop' bracket and vinculum notation.

Short division (72 = 60 + 12) $72 \div 3 =$

2.4

'72 divided by 3. 7 tens shared equally between 3 is 2 with a remainder of 1 ten. Exchange the 1 ten for 10 ones. I now have 12 ones which shared equally between 3 is 4. The answer is 24."

Representing problems and conditional knowledge

Andy says, 'I can use my three times table to work out 180 \div 3'. Explain what Andy could do to work out this calculation.

inks to tables

For example, use language of division linked to tables using counting stick

Using known facts

If 2 x 3 = 6 then 200 x 3 = 600 and 600 \div 3 = 200

Rearranging the dividend to find multiples of the divisor.

69÷ 3 =

'What do I know about the 3 x tables?'
"I know 3 x 10 = 30 and 3 x 3 = 9."

Remainders can never be greater than the divisor.

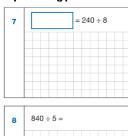

Place value materials to represent calculations

Short division

 $372 \div 6 =$

'372 divided by 6. 3 hundreds cannot be shared equally between 6, so exchange the hundreds for 30 tens. I now have 37 tens which shared equally between 6 is 6 with a remainder of 1 ten. Exchange the ten for 10 units. I now have 12 ones which shared equally between 6 is 2. The answer is 62."

Representing problems and conditional knowledge

Which calculations give 2 digit quotients?

NC 2014	Divide numbers up to 4 digits by a 1 digit number using the formal written method of short division and interpret remainders appropriately for the context (as remainders, as fractions, as decimals or by rounding, e.g. $98 \div 4 = \frac{98}{4} = 24 \text{ r2} = 24 \frac{1}{2} = 24.5 \approx 25$). Solve problems involving multiplication and division including using knowledge of factors and multiples, squares and cubes. Solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign. Solve problems involving multiplication and division including scaling by simple fractions and problems involving simple rates.	Divide numbers up to 4 digits by a 2 digit whole number using the formal written method of long division, and interpret remainders as whole number remainders, fractions, or by rounding, as appropriate to the context. Divide numbers up to 4 digits by a 2 digit number using the formal written method of short division where appropriate, interpreting remainders according to the context. Solve problems involving addition, subtraction, multiplication and division.

Interpreting remainders Using known facts Developing Using known facts If $6 \div 2 = 3$ then $6 \div 0.2 = 30$ and If $6 \div 2 = 3$ then $6000 \div 2$ declarative, "What do I know? 17 is not a multiple of 5." $6 \div 0.02 = 300$ = 3000 and procedural, $6000 \div 20 = 300$ conditional **Short division** With questions of this type where the knowledge Place value materials to $97.6 \div 5 =$ divisor is close to a number linked to the represent calculations 19.52 times tables, encourage the children to 5 9 47, 2610 use known facts and adjustment to set **Short division** "97.6 divided by 5. 9 tens shared equally between 5 is 1 with up the partial tables. $483 \div 7 =$ 32 = 3.4a remainder of 4 tens. Exchange the ten for 10 ones. I now have 47 units which shared equally between 5 is 9 with a remainder of 2 ones. Exchange the 2 onesfor 20 tenths, we From knowledge of now have 26 tenths. 26 shared equally between 5 equals 5 decimal/fraction 7 4 48 64 with a remainder of 1 tenth. Extend the dividend with a 0 in equivalents or by the hundredth's column. Exchange the tenth for 10 "484 divided by 7. 4 hundredths. 10 shared equally between 5 equals 2. The converting $\frac{1}{5}$ into $\frac{1}{10}$. hundreds cannot be shared answer is 19.52." equally between 7, so exchange the hundreds for Conditional knowledge Long division - partial table using doubling and 40 tens. I now have 48 tens Representing problems which shared equally halving between 7 is 6 with a Megan divides 500 by 8 and gets the 581 ÷ 7 = 17 remainder of 6 tens. answer 62r4. She re writes it as 62 r 1/2. Exchange the 6 tens for 60 Is she right? Explain your answer. ones, we now have 64 ones. 64 shared equally between 7 **Conditional Knolwedge** equals 9 remainder 1. The (thinking not generally recorded) Using factors to simplify long division 581 ÷ 7 could be calculated by the formal written method answer is 69 r1." of short division or it could be calculated by rearranging $384 \div 16$ 25) 815 the dividend, using known facts, into 560 and 21. "What do I know about the divisor?" Representing problems Record partial Correct the errors in the calculation below. Explain the tables. 5)815 error. $266 \div 5 = 73.1$ 24 384 (38 tens ÷16 = 2 r6; 2 x 16 =32) 16 5)165 (bring the 4 down) -32▼ (64 units ÷ 16 =4) 64 Simplify the fractions for remainders -64 (no remainder) Alan says that the solution to 186 ÷ 4 can be written as '46 remainder 2' or as '46.5'. Do you agree? Explain your answer. Identify common factors, common multiples and prime numbers Known facts Know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers. Recall prime numbers up to 19 Essential Division facts (4 x and 8 x tables) 100, 1000 times smaller Division facts up to 12 x 12 Halve larger numbers and knowledge decimals Division facts (3 x, 6 x and 12 x Partition to divide mentally Apply place value to derive division facts, Partition to divide mentally e.g. $12 \div 3 = 4$ so $1.2 \div 3 = 0.4$ including decimals tables; 3 x and 9 x tables) Division facts (11 x and 7 x tables) Halve larger numbers and decimals Tests of Tests for 2,3,5,6 &10 Tests for 2,3,5,6, 9 & 10 Any number with a digit sum Any number where the last two divisibility of a multiple of 9 will divide digits are divisible by 4, will all equally by 9 divide by 4
