

Hello Class 3!

I hope that you are all well and have enjoyed the good weather in your garden. I have been busy pulling out brambles, chopping up fallen branches and having several lovely bonfires. I do like a good bonfire!

I am sure that you have all had a go at some of the Maths activities I suggested for you and I hope you had fun with them. Remember, Maths is fun and we learn best by making mistakes! I am going to give you some more tasks to have a go at now. I hope you enjoy them. Take care of yourselves and stay safe. I hope that we will all be together again soon. Don't forget to keep a diary of all of the things that you have been doing, (not just the school work), so that we can share our experiences when we are back in school.

Bye for now,

Mr. Patch

Task 1

1. At the top of a page write a list of numbers between 2 and 9, with spaces between them. (Maybe 5 or 6 numbers in any order).
2. Underneath each number write the number you get if you double it.
3. Then double the next number and so on as far down the page as you can, doubling each time.

How big did the numbers get? Hundreds? Thousands?

4. Now start a new page and write 4 numbers across the top which have hundreds, tens and units.
5. This time we are halving. Find half of each number and write it underneath.
6. Halve again, and again. See how far you can go. (You can use fractions).

Task 2

In our currency we have 4 different bank notes and 8 different coins. Write down the value of each of these notes and coins. Work out how much you would have if you had one of each in your piggy bank. How much more would you need to make £100 in your piggy bank?

Task 3

How old are you? Write down your date of birth in words and numbers. If there are 365 days in a year, how old will you be on your next birthday in days? How many months old will you be?

Task 4

There are 24 hours in a day. How do you spend your time? Make a bar chart to show how much time you spend doing different activities during 24 hours. For example, how much time do you spend sleeping, eating, playing outside, playing inside, doing school work, watching television? Show this in hours on your bar chart. Are there any other activities that you should include? Don't put in anything that you spend less than one hour doing.
